

For staff in a care home: Top Tips for 'End of Life' oxygen.

1. Why do you think the patient need oxygen? Have they checked their 'sats'? Are they below 90-92% on a pulse oximeter?
2. If patients are breathless and have good 'sats', then other medications should be considered.
3. The patient's GP can request oxygen or care home nurses can ring the local home oxygen team for West and North Hampshire to see if they are able to offer any other support.
4. The home oxygen supplier is Dolby Vivisol on 0800 917 9840 and is open 24/7 for all Hampshire CCGs.
5. If oxygen is required then a Home Oxygen order form needs to be sent to the home oxygen supplier via [NHS.net](https://www.dolbyvivisol.com/services/healthcare-professionals/home-oxygen-services/england/ihorm-and-hoof-part-a/). A risk assessment and consent form (called an IHORM) must also be signed by the patient or their representative. Forms can be found here: <https://www.dolbyvivisol.com/services/healthcare-professionals/home-oxygen-services/england/ihorm-and-hoof-part-a/>
6. Deliveries can be within 4 hrs if urgently requested.
