Web Course

Start Course

Can you **identify** the most common bites and stings?

Do you know why **venom** from bees, hornets and wasps is more likely to **cause a severe** systemic hypersensitivity reaction?

Do you know that **redness**, itchiness, pain and **swelling** are more likely to be an allergic reaction than **an infection**?

Are you aware that **GP's are unlikely** to be involved even if patient has had symptoms for 10 days?

This course will answer these questions as well as looking at what you advise you can give people.

To access the course visit:
